

Oscar Weimann

Date of birth: 04/10/2005 | **Nationality:** German, Colombian | **Gender:** Male | **Phone:** (+31) 627167531 (Mobile) | **Email address:** oslewei@gmx.de

● ABOUT MYSELF

Ambitious, adaptable, connective

● EDUCATION & TRAINING

31/08/2015 - 07/07/2023 - THE HAGUE, NETHERLANDS

EUROPEAN BACCALAUREATE- EUROPEAN SCHOOL THE HAGUE

Address: Oostduinlaan 502596 JP | **Website:** <https://www.europeanschoolthehague.nl/>

01/09/2023 - Current - GRONINGEN, NETHERLANDS

BACHELOR OF COMPUTING SCIENCE- RIJKSUNIVERSITEIT GRONINGEN

- Software Engineering
- Cryptography
- Blockchains
- Cyber Threat Intelligence

Field(s) of study: Computing Science, Software Engineering | **Number of credits:** 215 | **Thesis:** Fully Decentralized Learning based on Gossip Protocol and Blockchain | **Website:** www.rug.nl

11/08/2025 - 12/12/2025 - SINGAPORE, SINGAPORE

EXCHANGE SEMESTER NTU- NANYANG TECHNOLOGICAL UNIVERSITY

Field(s) of study: Computing Science | **Website:** <https://www.ntu.edu.sg/>

● HONOURS AND AWARDS

10/07/2026 University of Groningen

Honours College As an alumni of the University of Groningen's Honours College I am able to meet and work with like-minded peers from all academic backgrounds within the university. I took extracurricular courses on: relativity (specifically simulating black holes), debate, team work, and right now I am doing a course on Religion.

This religion course specifically includes a Summer school to the Universidad Autònoma de Barcelona, and the monastery of Montserrat. As well as a research paper on "The crossroads between AI, AI generated religions and freedom of religion", where my chapter analyses how human biases are introduced into AI generated religions through LLM's design and their training. We are looking into getting it published in an academic journal.

12/12/2025 NTU

Exchange Semester NTU I had the Honour to represent the UG as an exchange student at the Nanyang Technological University in Singapore in the College of Computing and Data Science. It was an incredible experience, being with a very mixed group of amazing people. I learned a lot from Asia, other students, and the courses like Blockchain Technology and Biomedical Imaging.

● HOBBIES AND INTERESTS

Rugby I am a Rugby player, I have been for 10 years now. It has helped me immensely over the past decade, teaching me some very important things. I learned teamwork and the satisfaction of working and succeeding smoothly as a team. It has also been a huge help with training my mental and physical resilience.

In youth rugby I played at one of the best teams in the country (HRC). While as a student I did my part in promoting my team (GSRC) to second division, where we still are until today.

Recreational Programming Not only have I followed Computing Science as a study but I have always enjoyed programming and experimenting with computers, Arduinos, and Raspberry Pis since the age of 10. I have done multiple bigger projects since then. For example a path tracer written in Zig, and a deep learning library written in C.

Additionally, I enjoy learning different programming languages, currently I have a strong grasp over: C/C++, Python, Zig, Rust, Haskell, Gleam, Go, JS/TS, Java, ... But I always enjoy learning more, and about different ways to program computers. Learning all these languages especially has allowed me to have a better understanding, and visualisation, around computer science in general, specifically Data Structures and Algorithms, and System Design.

Travel In 2024 I took part in the DiscoverEU Erasmus+ programme where I won an Interrail ticket and travelled through Central Europe. I have travelled a lot, 3 times in Europe with Interrail. And one long 2 month backpacking trip through south-east and east Asia after my exchange at NTU in Singapore.

My love for travelling stems, not only from my already diverse background, but from an excitement and curiosity surrounding new cultures, foods, and places. It gave me perspective, confidence, and even broader international and cultural understanding.

● **CREATIVE WORKS**

20/09/2023 - 10/10/2023

- Designed and built 5x5x5 LED cube as a university project
- Uses Arduino to program a 3D Game of Life
- 3D printed case and self-soldered LEDs
- Uses an ESP32 to access the network and change modes and colors

01/08/2025 - CURRENT

- Built a path tracer following the Ray Tracing in One Weekend book series in Zig instead of C++
- Extended it with STL parsing and scene building
- Enabled hands-on understanding of Computer Graphics, System Design, and optimisation

Link <https://github.com/noknowledgeman/zig-rtweekend>

01/04/2026 - CURRENT

- Built a machine learning library in C using no external dependencies (optionally OpenBLAS), using a custom Arena Allocator for memory management
- Implements Feed Forward Neural Networks with ReLu and SoftMax, cross-entropy loss, the Adam optimizer, and mini-batching
- Designed for MNIST and Fashion-MNIST
- Self-directed project undertaken to deepen machine-learning fundamentals ahead of the thesis
- Planned extensions: Convolutional Neural Networks, and Transformers

Link <https://github.com/noknowledgeman/c-machine-learning>

● **LANGUAGE SKILLS**

Mother tongue(s): **GERMAN** | **SPANISH**

UNDERSTANDING		SPEAKING		WRITING
Listening	Reading	Spoken production	Spoken interaction	

ENGLISH	C2	C2	C2	C2	C2
DUTCH	C2	C2	C1	C1	B2
FRENCH	A2	A2	A2	A2	A2

● **COMMUNICATION AND INTERPERSONAL SKILLS**

International Background

I have a very diverse international background, being German and Colombian but growing up in The Hague. Being a third-culture kid, speaking 4 languages (English, Spanish, German, Dutch), and learning a fifth (French) gives me a unique ability to communicate with most Europeans, and a majority of the world.

This, including travelling through Asia during my exchange Semester in Singapore, gives me an incredible breadth of international and cultural knowledge.
